FlyRank AI Internship: General AI Fluency Track

Assignment # Week-1: What Are You Proving?

Proof Statement:-

I can build practical AI-powered Python applications that solve real problems, from integrating LLMs and APIs to creating usable desktop tools and applying machine learning concepts in projects. This proof is intended for AI hiring managers looking for entry-level AI or machine learning engineers who want evidence of practical skills beyond coursework. After reviewing my work, the one action I want them to take is to invite me for an interview.

Why?:

My CV can list my skills, but it cannot prove how I apply them to solve real problems; this proof gives employers tangible evidence of what I can actually build.
